

SEMI-AUTOMATIC MATTRESS COMPRESSION MACHINE

Specifications

Voltage : 380v/50Hz

Size of pressure plate : 50T

Maximum lifting distance : 520mm

Power of oil pump : 7.5Kw

No. of oil cylinder : 4pcs

Net weight : 3500Kg

Dimension : 2520x2240x2530mm

Volume : 13m³

Electronic power sealing : 1.5Kw

Sealing length : 2600mm

Features:

1. This machine is made up of three parts: the compressor machine, sealing machine and the vacuumizer machine.
2. Vacuum compressed packing is used for mattress compressor, the professional electronic control system can rapidly compressor mattress in different sizes and thickness under the condition of the ensuring not damage the mattress, which can greatly save transport space and improve transport efficiency, thus achieve the purpose of reducing transportation and storage cost.
3. The machine is four cylinder, is more stable when compress.
4. Can compress foam & spring both.
5. It was originally a sponge of four or five cabinet, but after compression it, only need a cabinet can be finished loading, that can save the storage and transportation space for manufacturers, and thus save relevant cost, create further mutually beneficial and win-win situation for manufacturers and customers.
6. Easy to install and operate.
Just connect the power supply and air supply when install.
