## Automatic Button Feeder (Shank Button)

### Introduction

1. Adopt PLC touch screen operating system, more stable software, more intuitive page;
2. Adopt two feeding ways: normal feeding, advanced feeding, freely convert as needed. Normal feed: feeding buttons from begging to the end directly. Advanced feed: Turn on First, then set the ready position after the arm picks buttons.
3. Unique clip seat include adjustment function: adjust long-handle buttons, short-handle buttons easily. Adopt unique imitation button contour design buckle clip, buckle more stable, no need to loosen the buckle clamp screw to reinstall, buckle change more convenient and fast.
4. Vibrating disk up and down function: just press "Vibration disc up and down" on the interface, and the system will automatically adjust the up and down positions of the vibration disc, making adjustment convenient and fast.
5. Adjustment of the handle length of the arm button: according to the length of the handle it can be adjusted quickly and conveniently by adjusting screws according to the actual requirements.
6. Clamp blocker: adopt cylinder blockle mode, the button does not run off and the clop is more stable.
7. Feeding buckle track: Unique design simple and efficient track adopts bottom and upper air blowing, no stuck more smoothly feeding. Timing back blowing device: the buttons will not be blocked at the inlet of the feeding track.
8. Servo motor: Adopt big power servo motor control, high speed, no noisy, higher efficient.
9. Anti-collision function: when operating, step on the foot pedal and do not release, the machine continuous feeding buttons, the arm of the machine will not collide with the buckle clip of the sewing head
